

PRITHVI MINE INSPECTION REPORT

Mine: BCCL Jharia

Inspection Date: 28-08-2026

Ventilation Inspection

The measured methane level at the mine was 1.25 percent.

During the inspection, ventilation air volume was found to be 450 m³/min.

The inspection-area temperature was recorded at 32 C.

Inspection personnel examined ventilation fan number three and confirmed that it was functioning correctly.

No blockage was found around the ventilation equipment.

The applicable inspection requirements were completed successfully.
